Abstract:

Chronic inflammation is an underlying factor in the development and progression of cancers. Nuclear factor-kappa B (NF-κB) and activator protein-1 (AP-1) are the important transcription factors that promote the expression of pro-inflammatory enzymes, cyclooxygenase-2 (COX-2), which contribute to cells inflammatory responses. 2-Methoxy-1,4-Naphthoquinone (MNQ), isolated from pericarps of *Impatiens balsamina*
